

## Energy Sistem enters in the gaming market with the sub-brand

### ES GAMING

*The European brand specialised in personal audio transfers all its experience in sound to the gamer world.*

Energy Sistem took advantage of the last IFA Berlin fair to announce the launch of a new sub-brand specialised in gaming products, ES GAMING.

There, products such as the ESG 5 Shock and ESG 2 Laser headphones were presented, both models designed to be used during long gaming sessions. For this reason they are circumaural with large ear cushions.

The drivers used in these Energy Sistem gaming headphones have a diameter of 50 (ESG 5 Shock) and 40 mm. (ESG 2 Laser) for each ear. In addition, they have an excellent frequency response so that users do not miss a single detail of the soundtrack of the games or have problems when listening to the conversations of their teammates.

Both references also feature an integrated positionable microphone. This microphone has been developed to ensure that the user's voice is easily picked up and reaches the listener's ears without ambient noise and with clarity.

Two years later ES GAMING is home to nine more references:

- Two headsets ([Earphones ESG 6 True Wireless](#) and [Earphones FE 650 True Wireless](#))
- Two mice ([Gaming Mouse ESG M5 Triforce](#) and [Gaming Mouse ESG M2 Flash](#))
- Two keyboards ([Gaming Keyboard ESG K6 Mechanick](#) and [Gaming Keyboard ESG K2 Ghosthunter](#))
- Three accessories ([Gaming Headset Stand ESG S3 DUO](#), [Gaming Pad ESG P5 RGB](#) and [Gaming Pad ESG P3 Hydro](#)).

The family is only growing thanks to the good reception it is having in the market.

Long live ES GAMING!
