

Energy Sistem welcomes sustainable music with its Eco Audio range

The European company specialising in personal audio launched a line of Eco Audio products in 2020 to coincide with the celebration of World Environment Day on 5th June.

Aware of the importance of caring for nature and promoting responsible consumption habits, the brand launched Eco Audio. A range of products made with environmentally friendly materials with the commitment that users can enjoy the experience of listening to music from sustainability.

It currently consists of four models of earphones and a loudspeaker created with wood from sustainable forests that have international FSC certification and guarantee that the materials used in their production have been carefully selected. Each product is unique, as the natural wood grains trace a different pattern on each one. In addition, the three wired earphones have a cable covered with natural hemp fibre yarns that do not require intensive processing and are therefore environmentally friendly.

The **Earphones Eco True Wireless Beech Wood** are True Wireless in-ear headphones made of sustainable beech wood with a balanced sound, clear treble and powerful bass in a compact design. It has a built-in microphone, USB Type-C charging and its charging case features Qi compatible wireless charging.

The **Earphones Eco Bluetooth Beech Wood** are wireless in-ear headphones with Bluetooth 5.1 technology, built-in microphone and USB Type-C charging. Its beech wood body from sustainable forests and organic hemp fibre cable deliver a clearer, deeper sound.

The **Earphones Eco Cherry Wood** is an in-ear headset with 3.5mm audio jack designed on a cherry wood body and hemp fibre cable featuring a multi-function hands-free microphone. These headphones deliver a natural sound thanks to the use of organic resources from nature.

The **Earphones Eco Walnut Wood** is an in-ear earphone with C-type connection, integrated digital audio converter, walnut wood body and hemp yarn cable with built-in microphone for hands-free control of music and calls.

The **Speaker Eco Beech Wood** is a portable speaker made of natural beech wood body and environmentally friendly organic fabric. It features Bluetooth 5.0, True Wireless Stereo

technology to connect two speakers simultaneously, FM Radio and rechargeable lithium battery with 8 hours of autonomy.

Our commitment goes one step further. Giving back to the ecosystem the main resource used in the development of these products. With the collaboration of the Spanish startup Bosquia, we are planting an Energy Sistem forest made up of walnut and cherry trees in one of the areas with the richest landscape in Spain and Europe affected by deforestation, the national and natural park of Doñana.

This is the first step towards a complete line of products created with 100% environmentally friendly materials that was born in 2020 with two earphones and one year later it is already formed by four earphones and a speaker.

Welcome to sustainable music!
