Winnenden, September 2022 – The new SC 3 Deluxe EasyFix and SC 4 Deluxe EasyFix steam cleaners from Kärcher keep your household spick and span – hygienically, thoroughly and without using any chemicals. They are also incredibly quick and easy to use. Thanks to their outstanding cleaning power, they remove dirt, built-up grime and 99.99% of all typical household bacteria*, as well as 99.999% of all coronaviruses** from smooth surfaces. When working with these machines, only clear tap water is used in the form of hot steam, providing particularly impressive cleaning power. Whether on taps, tiles, glass surfaces or floorboards – the result is always a clean, healthy living environment. The new, state-of-the-art design offers plenty of additional storage space, enabling accessories to be packed away easily.

Simple operation, optimum comfort

Both machines heat up extremely quickly – for the SC 3 Deluxe EasyFix, this process takes just 30 seconds. An LED light strip integrated into the

front of the machine lights up red during the heating phase. Once the steam cleaner is ready to use, the colour changes to green. Two steam stages on the SC 3 and three stages on the larger SC 4 enable the amount of steam to be adjusted depending on the surface to be cleaned and the level of dirt, enabling users to protect the material they are cleaning. To switch the machine on and off, and to select the steam stage, the SC 4 features a large control

** When cleaning at a cleaning speed of 30 cm/s using the maximum steam stage and with direct contact with the surface to be cleaned, 99.99% of all common household bacteria on common smooth, hard household surfaces are killed (test germs: Enterococcus hirae).*

*** With selective cleaning using the Kärcher steam cleaner, i.e. with a steaming duration of 30 seconds using the maximum steam stage with direct contact with the surface to be cleaned, 99.999% of enveloped viruses, such as coronavirus or influenza viruses (except the hepatitis B virus) can be eliminated on common smooth, hard household surfaces (test germ: modified vaccinia virus Ankara).*

knob with self-explanatory pictograms on the upper side of the machine.

At the same location, the SC 3 features a control panel, which can be used to select the steam stage.

Both models make it possible to work without interruptions. If the water supply runs low, it can be refilled at any time. The SC 4 Deluxe EasyFix makes this process especially convenient – it features a removable fresh water tank, which can be filled directly from the tap. On the SC 3 Deluxe EasyFix, a replaceable descaling cartridge guarantees a long lifetime.

Extensive accessories range for varied applications

Equipping these machines with accessories makes them even more ideal. The underside of the floor nozzle has a lamellar structure and distributes the steam impressively evenly. The hook-and-loop for fastening the microfibre floor cloth on the nozzle avoids the user having to come into contact with dirt and makes it easier to replace. Both models are also available as a white Premium machine with additional accessories. Even the basic models in the new model series include a handheld nozzle and pointed nozzle, a round brush and a crevice brush, and a microfibre cover for the handheld nozzle in the scope of delivery. All the accessories can be stored compactly in a compartment provided for them on the machine. Spending time searching for accessories is a thing of the past – they are all on hand whenever needed. There is even space for the power cable and steam hose, meaning that storing the machine is even easier. The SC 4 Deluxe EasyFix is also available in configuration options with an iron.
