OneLife presents the first sustainable design air purifier

At IFA 2022 in Berlin, OneLife GmbH will present the innovative air purifier OneLife X, which sets new standards not only in terms of design, but also in the areas of sustainability and efficiency.

Mönchengladbach, September 2022 - The COVID-19 pandemic has brought increased attention to the need for clean air. But beyond that, indoor pollutants and particulate matter have been a serious health concern for years. The OneLife X now puts an end to indoor air pollution by filtering even the smallest pollutant particles from the air thanks to a patented plasma filter technology.

The energy-saving air purifier not only filters the smallest particles and viruses from the room air, but is also made of sustainable materials and, thanks to its modern design, is also a true eye-catcher. OneLife X can be easily and conveniently operated directly on the device, via app or voice control. The air purifier also includes a reusable filter that can be easily rinsed out or cleaned in the dishwasher.

Our vision at OneLife is to enable people to breathe healthier air - especially indoors, where the air can be up to ten times more polluted than outdoor air. By using a plasma field and precision laser sensors the OneLife X captures and effectively eliminates 99.99% of all airborne particles and viruses. In doing so, our air purifier captures pollutant particles as small as 0.01 microns, which is 10 times smaller than the coronavirus.

The OneLife X is not only one of the most environmentally friendly air purifiers on the market, but also runs basically silently and consumes only 6 watts of power during operation less than an LED lamp. At the same time, it fits perfectly into any living environment thanks to its discreet modern design. The OneLife X is made of rapidly renewable bamboo and recycled plastic. The high-tech filter is easy to wash by hand or in the dishwasher and therefore never needs to be replaced.

With the help of the OneLife app indoor and outdoor air pollution levels can be observed at all times in real time. With a simple push of a button or voice command via Amazon Alexa, Google Home Assistant or Apple Siri, the OneLife X easily ensures a healthy indoor climate.

Press release

The innovative health tech company OneLife had the ambition to develop an air purifier for the next generation of consumers. It should combine sustainable design with intelligent sensor technology and intuitive control, work completely autonomously and always ensure a healthy feel-good climate. The OneLife X protects us from pollen, fine dust, bacteria and viruses, increases our concentration and productivity, reduces stress, alleviates asthma and allergies and, last but not least, ensures a more restful sleep thanks to its particularly quiet operation.

Experience the OneLife X live at our **booth 320/ hall 20**. The OneLife team is looking forward to your visit!

About OneLife

Innovative health tech company OneLife is on a mission to revolutionize the health tech industry, starting with the air we breathe every day. The OneLife team of engineers, air quality experts and design pioneers - based in Mönchengladbach and San Francisco - develops innovative products to make the world a healthier place. OneLife's visionary solutions are both sustainable and efficient. They make it possible to live a healthier life while protecting the planet. Learn more at www.onelife.eco.
